

Spotting Uncle Sam's Cabins

European capitals are under massive surveillance by FVEY networks located on diplomatic premises. Here is some reverse in depth spying on one of the main European NSA/SCS stations, location Vienna 1220
In collaboration with Cryptome.

How NOT to spy on the FVEY

- Forget about drones. Flyovers of buildings only alert the targets at an early stage besides being illegal.
- Do not expect quick results but a both lengthy and fascinating process when intelligence comes dripping in.
- These NSA/SCS et al designed stations are not standalone cabins but wireless network nodes
- Targets are mobile phone network BSCs. Line of sight is what matters, but measuring is tricky.
- Beware of premature publishing.

In depth: US mission to the UN Vienna

... but sometimes drones can be useful
